An introduction to

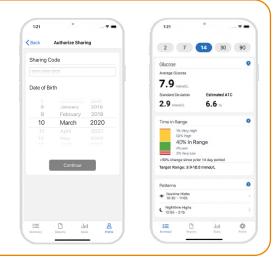

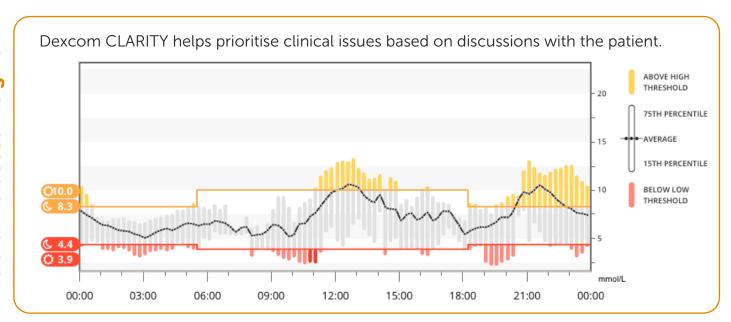

Patients using the Dexcom continuous glucose monitoring (CGM) app automatically and continuously* send their glucose data to their Dexcom CLARITY accounts.

Patients authorise data sharing using the Dexcom CLARITY clinic sharing code to link the patient and clinic accounts.

Encourage patients to use the CLARITY app so they can receive weekly notifications of progress.

Register your clinic at clarity.dexcom.eu/professional

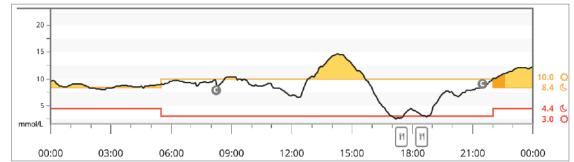

^{*} While connected to the internet with consent to share data.

[¶] Estimated A1C is only an estimate and does not replace the HbA1c test. Dexcom CLARITY determines an eA1C as the average glucose from a minimum number of days with a minimum duration of CGM wear time. If "N/A" is displayed here, there is not enough data to estimate A1C.

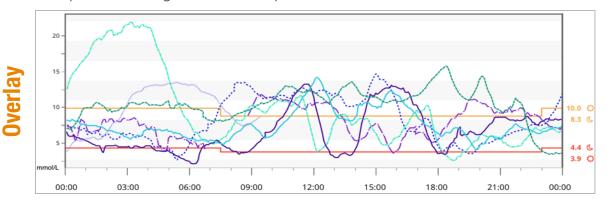

Dexcom CLARITY provides relevant patterns and trends to help with diabetes management.

Offering a full range of reports to suit your needs, including Patterns, Trends, and Statistics.

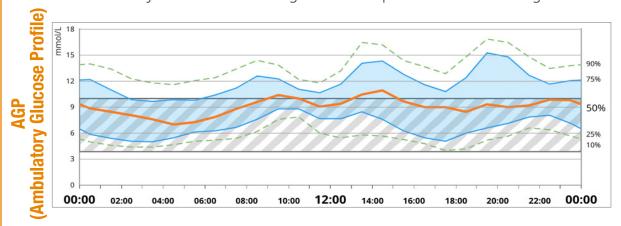

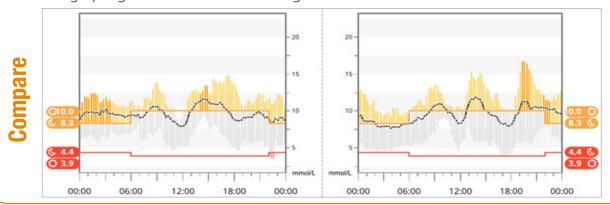

Visualise patterns using all CGM data points.

View the variability around the mean glucose and patterned areas of highs and lows.

Encourage progress and evaluate changes made.

For more information on Dexcom CLARITY, please contact us on 1300 851 056 or at diabetes@amsl.com.au
